# ROWSE HYDRAULIC RAKES CO., INC

## THE NEW "WINDROW TURNER" FOR 2010 (SIDEKICK)

LIST PRICE  
Effective October 2009

5-Wheel Model \_\_\_\_\_ \$6,650.00

New for 2010, the Rowse Windrow Turner is designed as a multipurpose management tool. Patterned after the Rowse Rubber Mount Tooth Ultimate Rake, the windrow turner is durably built of ¼" wall x 5" x 5" square tubing.

The lift tube, bellcrank arms and wheels are the same as the Rowse Ultimate Rake. The tilt of the wheel lifts the windrow from the ground and gently fluffs and turns the windrow over. The raking wheels are crop driven, not ground driven, so mud, dirt or rocks are not put into the windrow.

The wheels are adjustable in height and weight, a height limiter is standard on all wheels.

The design of the Rowse Windrow Turner allows the unit to turn and move the heaviest of windrows, yet gentle enough to turn crops such as small grain, oats, wheat, etc., with little or no grain loss.

All prices quoted are F.O.B. at our factory North of Burwell
